

Technical Foreign Language Training

The AIS Language Office researches and develops technical foreign language sustainment programs for the MI soldier-linguist. Current distance learning and computer technology are brought together to send the most current training and evaluation product to the soldier and the commander.

Other foreign language programs include the Foreign Language Instruction via Distance Learning (FLIDL), MI Language Training (MILT), and the 97L Translator/Interpreter MOS.

Language MOS Evaluation Plan (LMEP)

LMEP offers integrated language and MOS training and evaluation. It provides the necessary information for the linguist and the commander to focus on areas that require improvement. True operational foreign language proficiency can finally be achieved!

The training support package (TSP) is under development in Korean, Arabic, and Russian. The Korean HUMINT Module will soon be sent to the field for validation by Korean 97E linguists.

The TSP is a Toolbook task-based training program that will sustain and enhance the interrogator's technical language skills with integrated language and MOS interactive exercises.

Interrogator Notebook

The notebook is a complete Order of Battle interrogation guide with point and click translation and Korean audio capability. The response data base offers up to ten audio replies for each question in the notebook. This reinforcement will enable a linguist to interrogate under various conditions.

LMEP Audio Map Tracking / Map Reading

Follow an audio dialog/narration that describes a route of travel on a 1:50,000 map image from a Point of Capture to a correct disposition location.

Extract information from an audio dialog that exploits the disposition and correctly fill out a SALUTE Report in the program.

Interactive map reading exercises teaching terrain feature identification, intersection, resection, etc.

Hanja Trainer

Training index of the 1800 standard high school level instructed hanja characters.

LMEP Subject Areas

Soldier linguists are evaluated in the HUMINT tasks of:

- ❖ Screening
- ❖ Planning and preparation
- ❖ Interrogation

- ❖ Interpretation
- ❖ DOCEX

They are evaluated in the SIGINT tasks of:

- ❖ Traffic ID
- ❖ Scribe/Translate
- ❖ Handscan
- ❖ Report

(Focus on extraction of info over format.)

- ✓ Vocab reinforcement
- ✓ Simulated radio traffic drills
- ✓ Live traffic drills

Future LMEP Enhancements

- ❖ SIGINT Module
